THE PHONEBOOK PROJECT

DOCUMENTATION

Purpose:

We will make a phonebook where we can save a contact no, erase a contact no, and search a contact no. using c program.

USERS:

User need to input his/her choice to start the programme .Before starting the smart phonebook, user have to aware of what he is typing.Because once he will entry any data on this application he wont be able to edit those!!We don't have that feature on our application.The user can only delete contacts no. After he will entry the contact no, he have to save after every entry of new contact.If the user don't save contact no before exiting the app it wont be found when the application will run next time!!!So the user must have to save before exiting the application!!! After all the info is filled by the user will save contact and he/she will be able to use smart phonebook properly. After

that user can search by first name,last name and phone number and find any specific contac no.
Users are allowed to fill any number,but if the user enter max 100 digits it will show an error message.The user can input contact as much as they want.Because it's a smart phonebook!!!!!!!

The Smart Phonebook Requirments:

The user must know English language.Becasue it's interface in English!!!
